Work Zone Legend & Symbol Information:

These cells are in Microstation OpenRoads. The V8i cells are outdated and are now legacy.

Cell origin points have been changed. It's now back in the middle of channelizing devices. Origin point of tables have been modified too. This requires additional work by the user when replacing old cells.

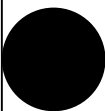

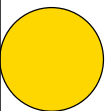

All work zone cells are now in full color (but printable in black/white).

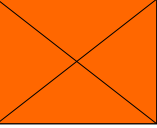

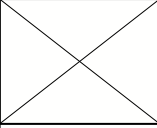

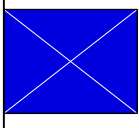

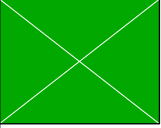

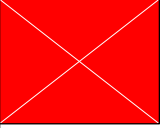

For additional information or requests, contact HQworkzone@wsdot.wa.gov.

PCMSs

Numerous PCMS work zone cells are available for common scenarios.

Specify rather a full-size PCMS (11'x6') or mPCMS (6'x4') is used by using the correct symbol and changing "mPCMS" table table to "PCMS" (no longer doing different cells for mPCMS vs PCMSs)

mPCMSs permitted on 2-lane freeways and all other roadways (including 4-lane divided highways). A PCMS should be used on freeways with 3 or more lanes when feasible (gating mPCMSs on both shoulder is also acceptable on 3+ lane freeways).

PCMSs are optional per MUTCD (only required by WSDOT when temporarily shifting traffic onto paved shoulder intermittently--not required when roadway reconfigured with pavement markings).

Do not use generic messages or repeat what's already on signage.
