Hydraulic Project Approval Provisions for Fish Passage

The following are the template provisions that Washington Department of Fish and Wildlife (WDFW) permitting biologists use to populate Hydraulic Project Approvals. WDFW encourages their biologists to use language from this template as much as possible, but allow the option of adding custom provisions based on additional science or site-specific conditions.

Commitment ID #	Category	WDFW HPA Provision Language	Modified Language for Contract Language / Commitment Tracking System	Phase	Responsibility	Existing Method of Implementation	Notes
FPHPA - 1	AUTHORIZED WORK TIMES/TIMING LIMITATION	Work below the ordinary high water line must only occur between INSERT DATE HERE and INSERT DATE HERE.	AUTHORIZED WORK TIMES/TIMING LIMITATION: The Contractor may begin Work below the Ordinary High Water Line on [INSERT DATE HERE] and must complete all the Work by [INSERT DATE HERE].	Construction	WSDOT Contractor	GSP 1-07.5(2).OPT1(A).FR1	In the Index, instruct users to use one of the days allowed in the fish window to allow Region Biologists to remove the fish block nets because it is also in-water work.
FPHPA - 2	PROJECT APPROVALS	You must accomplish the work per plans and specifications submitted with the application and approved by the Washington Department of Fish and Wildlife, entitled ENTER PLAN TITLE HERE, dated INSERT DATE HERE, and attached E-mail entitled, 'RE: ENTER PLAN TITLE HERE, received on INSERT DATE HERE, except as modified by this Hydraulic Project Approval. You must have a copy of these plans available on site during all phases of the project proposal.	PROJECT APPROVALS: Accomplish the work per plans and specifications submitted with permit application and approved by the Washington Department of Fish and Wildlife. WSDOT and the Contractor must have a copy of these plans available on site during all phases of the project proposal.	Construction	WSDOT Contractor	SS 1-04.2, SS 1-07.13(1)	The contractor must follow the Contract, which WSDOT shall ensure meets the intent of this commitment.
FPHPA - 3	NOTIFICATION REQUIREMENTS	You or your agent must contact the Washington Department of Fish and Wildlife by e-mail at HPAapplications@dfw.wa.gov; mail to Post Office Box 43234, Olympia, Washington 98504-3234; or fax to (360) 902-2946 at least three business days before starting work, one day before removing the temporary bypass, and again within seven days after completing the work. The notification must include the permittee's name, project location, starting date for work or date the work was completed, and the permit number. The Washington Department of Fish and Wildlife may conduct inspections during and after construction; however, the Washington Department of Fish and Wildlife will notify you or your agent before conducting the inspection.	NOTIFICATION REQUIREMENTS: WSDOT, or the Contractor (if applicable), must contact the Washington Department of Fish and Wildlife by e-mail at HPAapplications@dfw.wa.gov; mail to Post Office Box 43234, Olympia, Washington 98504-3234; or fax to (360) 902-2946 at least three business days before starting work below the ordinary high water line, one day before removing the temporary bypass and again within seven days after completing the work. The notification must include the permittee's name, project location, starting date for work or date the work was completed, and the permit number. The Washington Department of Fish and Wildlife may conduct inspections during and after construction; however, the Washington Department of Fish and Wildlife will notify you or your agent before conducting the inspection.	Construction	WSDOT Contractor	SS 8-31.3(1)B SS 8-31.3(6) GSP 1-07.5(2).OPT1.GR1	None

Commitment ID #	Category	WDFW HPA Provision Language	Modified Language for Contract Language / Commitment Tracking System	Phase	Responsibility	Existing Method of Implementation	Notes
FPHPA - 4	NOTIFICATION REQUIREMENTS	You or your agent must contact the Washington Department of Fish and Wildlife by e-mail at HPAapplications@dfw.wa.gov; mail to Post Office Box 43234, Olympia, Washington 98504-3234; or fax to (360) 902-2946 at least fourteen business days before starting work to arrange a pre-construction contractor meeting onsite. The notification must include the permittee's name, project location, starting date, and the HPA permit number.	NOTIFICATION REQUIREMENTS: WSDOT, or the Contractor (if applicable), must contact the Washington Department of Fish and Wildlife by e-mail at HPAapplications@dfw.wa.gov; mail to Post Office Box 43234, Olympia, Washington 98504-3234; or fax to (360) 902-2946 at least fourteen business days before starting work to arrange a pre-construction contractor meeting onsite. The notification must include the permittee's name, project location, starting date, and the HPA permit number.	Construction	WSDOT Contractor	 SS 8-31.3(1)B GSP 1-07.5.OPT1(B).FR1	None
FPHPA – 5	NOTIFICATION REQUIREMENTS	If a fish kill occurs or fish are observed in distress at the job site, immediately stop all activities causing harm. Immediately notify the Washington Department of Fish and Wildlife of the problem. If the likely cause of the fish kill or fish distress is related to water quality, also notify the Washington Military Department Emergency Management Division at 1-800-258-5990. Activities related to the fish kill or fish distress must not resume until the Washington Department of Fish and Wildlife gives approval. The Washington Department of Fish and Wildlife may require additional measures to mitigate impacts.	NOTIFICATION REQUIREMENTS: If fish are killed or observed in distress at the job site, the Contractor must immediately stop all activities causing harm. WSDOT shall immediately notify the Washington Department of Fish and Wildlife of the problem. If the likely cause of the fish kill or fish distress is related to water quality, also notify the Washington Military Department Emergency Management Division at 1-800-258-5990. Activities related to the fish kill or fish distress must not resume until the Washington Department of Fish and Wildlife gives approval. The Washington Department of Fish and Wildlife may require additional measures to mitigate impacts.	Construction	WSDOT Contractor	 SS 1-07.1, SS 1-07.5(1), SS 1-07.5(2)	None
FPHPA - 6	MONITORING	In addition to the Washington Department of Transportation's current fish passage monitoring plan, the following must be conducted post-construction after the first winter annually for three years and once more at year five: A) Low flow channel monitoring for fish passage in the constructed and relic channel. A hydraulic drop over 0.5 feet, or subsurface flow (as compared to the reference reach) must not occur. Photo Point Monitoring along the channel may be used. B) Three instream temperature monitoring stations for the newly constructed channel. C) Photo Point Monitoring of the existing confluence with [INSERT TEXT HERE] and the new confluence. A copy of the monitoring report must be submitted to the WDFW Habitat Program at HPAapplications@dfw.wa.gov within 3 months of each evaluation. Each report must include the HPA permit number, permittee, contact person, telephone number, date of report, time period, and a copy of the assessment and subsequent findings per the approved plan. Corrective action may be required.	MONITORING: In addition to the Washington Department of Transportation's current fish passage monitoring plan, the following must be conducted post-construction after the first winter annually for three years and once more at year five: A) Low flow channel monitoring for fish passage in the constructed and relic channel. A hydraulic drop over 0.5 feet, or subsurface flow (as compared to the reference reach) must not occur. Photo Point Monitoring along the channel may be used. Each report must include the HPA permit number, permittee, contact person, telephone number, date of report, time period, and a copy of the assessment and subsequent findings per the approved plan. Corrective action may be required.	Operations and Maintenance	WSDOT		TBD if WSDOT will monitor through staff or hire a contractor. If a contractor, then 102.4

Commitment ID #	Category	WDFW HPA Provision Language	Modified Language for Contract Language / Commitment Tracking System	Phase	Responsibility	Existing Method of Implementation	Notes
FPHPA - 7	PLANTING/REVEGETATION	Replace native riparian zone and aquatic vegetation, and wetland vascular plants (except noxious weeds) damaged or destroyed by construction using a proven methodology. Complete replanting of riparian vegetation during the first dormant season (late fall through late winter) after project completion per the approved plan. Maintain plantings for at least three years to ensure at least eighty percent of the plantings survive. Failure to achieve the eighty percent survival in year three will require you to submit a plan with follow-up measures to achieve requirements or reasons to modify requirements.	PLANTING/RE-VEGETATION: Replace native riparian zone and aquatic vegetation, and wetland vascular plants (except noxious weeds) damaged or destroyed by construction using a proven methodology. Complete replanting of riparian vegetation during the first dormant season (late fall through late winter) after project completion per the approved plan. Maintain plantings for at least three years to ensure at least eighty percent of the plantings survive. Failure to achieve the eighty percent survival in year three will require you to submit a plan with follow-up measures to achieve requirements or reasons to modify requirements.	Design Construction	WSDOT Contractor	Roadside Policy Roadside Manual State Forces (yr. 2-3) Contract Plans, SS 8-02.3(2)A SS 8-02.3(2)B, SS 8-02.3(2)C, SS 8-02.3(3)B, SS 8-02.3(13) (yr. 1)	WSDOT has an extensive and thorough Roadside Restoration process. Planting is done by the Contractor the first year and then state forces (WSDOT) continue for another two years. Note: only tracking the CN aspect of this commitment in CTS.
FPHPA - 8	REPORTING REQUIREMENTS	You, your agent, or contractor must take photographs of the job site before the work begins and after the work is completed. You must upload the photographs to the post-permit requirement page in the Aquatic Protection Permitting System (APPS) or mail them to Washington Department of Fish and Wildlife at Post Office Box 43234, Olympia, Washington 98504-3234 within 30-days after the work is completed.	REPORTING REQUIREMENTS: WSDOT must take photographs of the job site before the work begins and after the work is completed. Upload the photographs to the post-permit requirement page in the Aquatic Protection Permitting System (APPS) or mail them to Washington Department of Fish and Wildlife at Post Office Box 43234, Olympia, Washington 98504-3234 within 30-days after the work is completed.	Construction	WSDOT	Managed at the Region Environmental or Project Engineering Office level.	None
FPHPA - 9	INVASIVE SPECIES CONTROL	Follow Method 1 for low risk locations (i.e. clean/drain/dry). Thoroughly remove visible dirt and debris from all equipment and gear (including drive mechanisms, wheels, tires, tracks, buckets, and undercarriage) before arriving and leaving the job site to prevent the transport and introduction of invasive species. For contaminated or high risk sites please refer to the Method 2 Decontamination protocol. Properly dispose of any water and chemicals used to clean gear and equipment. You can find this and additional information in the Washington Department of Fish and Wildlife's “Invasive Species Management Protocols”, available online at https://wdfw.wa.gov/species-habitats/invasive/prevention.	INVASIVE SPECIES CONTROL: Follow Method 1 for low risk locations (i.e. clean/drain/dry). Thoroughly remove visible dirt and debris from all equipment and gear (including drive mechanisms, wheels, tires, tracks, buckets, and undercarriage) before arriving and leaving the job site to prevent the transport and introduction of invasive species. For contaminated or high risk sites please refer to the Method 2 Decontamination protocol. Properly dispose of any water and chemicals used to clean gear and equipment. You can find this and additional information in the Washington Department of Fish and Wildlife's “Invasive Species Management Protocols”, available online at https://wdfw.wa.gov/species-habitats/invasive/prevention.	Construction	WSDOT Contractor	SS 1-05.9, GSP 1-05.9.OPT2.FR1	None
FPHPA - 10	STAGING, JOB SITE ACCESS, AND EQUIPMENT	Establish staging areas (used for equipment storage, vehicle storage, fueling, servicing, and hazardous material storage) in a location and manner that will prevent contaminants such as petroleum products, hydraulic fluid, fresh concrete, sediments, sediment-laden water, chemicals, or any other toxic or harmful materials from entering waters of the state.	STAGING, JOB SITE ACCESS, AND EQUIPMENT: Establish staging areas (used for equipment storage, vehicle storage, fueling, servicing, and hazardous material storage) in a location and manner that will prevent contaminants such as petroleum products, hydraulic fluid, fresh concrete, sediments, sediment-laden water, chemicals, or any other toxic or harmful materials from entering waters of the state.	Construction	Contractor	SS 1-07.5(2), SS 1-07.5(3), SS 1-07.15(1), GSP 1-07.5.OPT1(C).FR1	None

Commitment ID #	Category	WDFW HPA Provision Language	Modified Language for Contract Language / Commitment Tracking System	Phase	Responsibility	Existing Method of Implementation	Notes
FPHPA – 11	STAGING, JOB SITE ACCESS, AND EQUIPMENT	Equipment used for this project may operate waterward of the ordinary high water line, provided the drive mechanisms (wheels, tracks, tires, etc.) do not enter or operate waterward of the ordinary high water line.	STAGING, JOB SITE ACCESS, AND EQUIPMENT: Equipment used for this project may operate waterward of the ordinary high water line, provided the drive mechanisms (wheels, tracks, tires, etc.) do not enter or operate waterward of the ordinary high water line.	Construction	Contractor	SS 1-07.5(1)	None
FPHPA – 12	STAGING, JOB SITE ACCESS, AND EQUIPMENT	Check equipment daily for leaks and complete any required repairs in an upland location before using the equipment in or near the water.	STAGING, JOB SITE ACCESS, AND EQUIPMENT: Check equipment daily for leaks and complete any required repairs in an upland location before using the equipment in or near the water.	Construction	Contractor	SS 1-07.15(1)	None
FPHPA – 13	STAGING, JOB SITE ACCESS, AND EQUIPMENT	Trees identified for removal as part of this project larger than four inches in diameter and taller than six feet, may be placed in the low flow channel or within the stream buffer. To preserve habitat, the trees must not be cut into smaller pieces than approximately 20' lengths, and root wads are not to be removed from the trunk (bole) to the greatest extent possible.	STAGING, JOB SITE ACCESS, AND EQUIPMENT: Trees identified for removal as part of this project larger than four inches in diameter and taller than six feet, may be placed in the low flow channel or within the stream buffer. To preserve habitat, the trees must not be cut into smaller pieces than approximately 20' lengths, and root wads are not to be removed from the trunk (bole) to the greatest extent possible.	Construction	Contractor	SS 1-04	None
FPHPA – 14	STAGING, JOB SITE ACCESS, AND EQUIPMENT	Equipment used in or near water must use environmentally acceptable lubricants composed of biodegradable base oils. These are vegetable oils, synthetic esters, and polyalkylene glycols.	STAGING, JOB SITE ACCESS, AND EQUIPMENT: Equipment used in or near water must use environmentally acceptable lubricants composed of biodegradable base oils. These are as vegetable oils, synthetic esters, and polyalkylene glycols.	Construction	Contractor	SS 8-01.3(1)C6	Limited to hydraulic fluids.
FPHPA – 15	STAGING, JOB SITE ACCESS, AND EQUIPMENT	Place biodegradable filter blanket material from the bank or a barge. Dumping material onto the bank face may occur only if the toe is established and the material can be confined to the bank face.	STAGING, JOB SITE ACCESS, AND EQUIPMENT: Place biodegradable filter blanket material from the bank or a barge. Dumping material onto the bank face may occur only if the toe is established and the material can be confined to the bank face.	Construction	Contractor	Permit Application Package, Contract Plans, SS 1-04	None
FPHPA – 16	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	Remove soil or debris from the drive mechanisms (wheels, tires, tracks, etc.) and undercarriage of equipment prior to operating the equipment waterward of the ordinary high water line.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: Remove soil or debris from the drive mechanisms (wheels, tires, tracks, etc.) and undercarriage of equipment prior to operating the equipment waterward of ordinary high water line.	Construction	Contractor	SS 1-07.1	None
FPHPA – 17	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	If excavation or other construction activities take place waterward of the ordinary high water line, isolate the work area from the stream flow (if present) by using a cofferdam, bypass, or similar structure.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: If excavation or other construction activities take place waterward of the ordinary high water line, isolate the work area from the stream flow (if present) by using a cofferdam, bypass, or similar structure.	Construction	Contractor	SS 8-31.3(2)B	None
FPHPA – 18	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	Install and maintain curbs or wheel guards to prevent aggregate or earth-type paving material from entering the stream.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: Install and maintain curbs or wheel guards to prevent aggregate or earth-type paving material from entering the stream.	Maintenance	WSDOT	Maintenance & Operations	None

Commitment ID #	Category	WDFW HPA Provision Language	Modified Language for Contract Language / Commitment Tracking System	Phase	Responsibility	Existing Method of Implementation	Notes
FPHPA – 19	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	Protect structural fill associated with the culvert installation from erosion to the ADD TEXT HERE-year peak flow.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: Protect structural fill associated with the culvert installation from erosion to the [ADD TEXT HERE]-year peak flow.	Construction	Contractor	Permit application package, Contract Plans, SS 1-04	None
FPHPA – 20	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	Place spoils from the excavation and relocation of the new channels in an upland area above the limits of anticipated floodwater.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: Place spoils from the excavation and relocation of the new channels in an upland area above the limits of anticipated floodwater.	Construction	Contractor	SS 1-07.5(2), SS 3-01.2	None
FPHPA – 21	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	Do not release overburden material into the waters of the state when resloping the bank.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: Do not release overburden material into the waters of the state when resloping the bank.	Construction	Contractor	Contract Plans, SS 1-04, SS 1-07.5(3)	None
FPHPA – 22	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	Protect all disturbed areas from erosion. Maintain erosion and sediment control until all work and cleanup of the job site is complete.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: Protect all disturbed areas from erosion. Maintain erosion and sediment control until all work and cleanup of the job site is complete.	Construction	Contractor	SS 8-01, SS 8-31.3(2)	None
FPHPA – 23	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	All erosion control materials that will remain onsite must be composed of 100% biodegradable materials.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: All erosion control materials that will remain onsite must be composed of 100% biodegradable materials.	Construction	Contractor	SS 8-01.3(16)	None
FPHPA – 24	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	Straw used for erosion and sediment control, must be certified free of noxious weeds and their seeds.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: Straw used for erosion and sediment control, must be certified free of noxious weeds and their seeds.	Construction	Contractor	SS 9-14.5(1)	None
FPHPA - 25	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	If flow conditions arise that will result in erosion or siltation of waters of the state, stop all hydraulic project activities except those needed to control erosion and siltation.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: If flow conditions arise that will result in erosion or siltation of waters of the state, stop all hydraulic project activities except those needed to control erosion and siltation.	Construction	Contractor	SS 1-07.5(2), SS 8-31.3(6)	WSDOT will stop all work if project activities result in distressed fish or a fish kills, including silt buildup on bed or bottom of water.
FPHPA – 26	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	Prevent project contaminants, such as petroleum products, hydraulic fluid, fresh concrete, sediments, sediment-laden water, chemicals, or any other toxic or harmful materials, from entering or leaching into waters of the state.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: Prevent project contaminants, such as petroleum products, hydraulic fluid, fresh concrete, sediments, sediment-laden water, chemicals, or any other toxic or harmful materials, from entering or leaching into waters of the state.	Construction	Contractor	SS 1-07.1, SS 1-07.5(2), SS 1-07.5(3), SS 1-07.15(1)	None
FPHPA – 27	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	Route the construction water (wastewater) from the project to an upland area above the limits of anticipated floodwater. Remove fine sediment and other contaminants before discharging the construction water to waters of the state.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: Route the construction water (wastewater) from the project to an upland area above the limits of anticipated floodwater. Remove fine sediment and other contaminants before discharging the construction water to waters of the state.	Construction	Contractor	SS 8-01.3(1)C, SS 8-31.3(2)B	None

Commitment ID #	Category	WDFW HPA Provision Language	Modified Language for Contract Language / Commitment Tracking System	Phase	Responsibility	Existing Method of Implementation	Notes
FPHPA – 28	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	Deposit waste material from the project, such as construction debris, silt, excess dirt, or overburden, in an upland area above [EXTREME HIGH TIDE -OR- THE LIMITS OF ANTICIPATED FLOODWATER] unless the material is approved by the Washington Department of Fish and Wildlife for reuse in the project.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: Deposit waste material from the project, such as construction debris, silt, excess dirt, or overburden, in an upland area above [EXTREME HIGH TIDE -OR- THE LIMITS OF ANTICIPATED FLOODWATER] unless the material is approved by the Washington Department of Fish and Wildlife for reuse in the project.	Construction	Contractor	SS 3-02.3, SS 3-03.3(7)C	None
FPHPA – 29	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	Store all construction and deconstruction material in a location and manner that will prevent contaminants such as petroleum products, hydraulic fluid, fresh cement, sediments, sediment-laden water, chemicals, or any other toxic or harmful materials from entering waters of the state.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: Store all construction and deconstruction material in a location and manner that will prevent contaminants such as petroleum products, hydraulic fluid, fresh cement, sediments, sediment-laden water, chemicals, or any other toxic or harmful materials from entering waters of the state.	Construction	Contractor	SS 1-07.5(2), SS 1-07.5(3), SS 1-07.15(1)	None
FPHPA – 30	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	Do not stockpile [CONSTRUCTION -OR- DREDGED] material waterward of the ordinary high water line.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: Do not stockpile construction [CONSTRUCTION -OR- DREDGED] waterward of the ordinary high water line.	Construction	Contractor	SS 1-07.5(2), GSP 1-07.5(6).OPT1(B).GR1, GSP 1-07.5.OPT1(C).FR1	None
FPHPA – 31	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT	Return water flow slowly to the in-water work area to prevent the downstream release of sediment laden water. If necessary, install silt fencing above the bypass outlet to capture sediment during re-watering of the channel.	SEDIMENT, EROSION, AND POLLUTION CONTAINMENT: Return water flow slowly to the in-water work area to prevent the downstream release of sediment laden water. If necessary, install silt fencing above the bypass outlet to capture sediment during re-watering of the channel.	Construction	Contractor	SS 8-31.3(2)B, SS 8-31.3(6)	Silt fence should NEVER be placed in a stream…wrong application.
FPHPA – 32	HABITAT FEATURES	Limit the removal of native bankline vegetation to the minimum amount needed to construct the project.	HABITAT FEATURES: Limit the removal of native bankline vegetation to the minimum amount needed to construct the project.	Design	WSDOT		This is already part of WSDOT's avoid, minimize, mitigate decision process. And we submit limits of impacts in the permit application.
FPHPA – 33	HABITAT FEATURES	Retain all natural habitat features on the bed or banks including large woody material and boulders. You may move these natural habitat features during construction but you must place them near the preproject location before leaving the job site.	HABITAT FEATURES: Retain all natural habitat features on the bed or banks including large woody material and boulders. The Contractor may move these natural habitat features during construction but must place them near the preproject location before leaving the job site.	Design Construction	WSDOT Contractor	Permit Application Package, Contract Plans, SS 1-04	WSDOT will prepare a project application to meet stream simulation that will include these features if possible. The Contractor is not expected to interpret what WDFW wants, so just follow the Plans.

Commitment ID #	Category	WDFW HPA Provision Language	Modified Language for Contract Language / Commitment Tracking System	Phase	Responsibility	Existing Method of Implementation	Notes
FPHPA – 34	CONSTRUCTION MATERIALS	To prevent leaching, construct forms to contain any wet concrete. Place impervious material over any exposed wet concrete that will come in contact with waters of the state. Forms and impervious materials must remain in place until the concrete is cured.	CONSTRUCTION MATERIALS: To prevent leaching, construct forms to contain any wet concrete. Place impervious material over any exposed wet concrete that will come in contact with waters of the state. Forms and impervious materials must remain in place until the concrete is cured.	Construction	Contractor	SS 1-07.5(2), SS 1-07.5(3), SS 6-02.3(11)	None
FPHPA – 35	CONSTRUCTION MATERIALS	Do not use bed gravel for exterior armor or backfill unless approved by the Washington Department of Fish and Wildlife.	CONSTRUCTION MATERIALS: Do not use bed gravel for exterior armor or backfill unless approved by the Washington Department of Fish and Wildlife.	Design Construction	WSDOT Contractor	Permit Application Package, Contract Plans, SS 1-04	None
FPHPA – 36	CONSTRUCTION MATERIALS	Use material for the approaches that is structurally stable and that will not harm fish life if it erodes into the water.	CONSTRUCTION MATERIALS: Use material for the approaches that is structurally stable and that will not harm fish life if it erodes into the water.	Construction	Contractor	Permit application Package, Contract Plans, SS 1-04	This just another way of saying round rock. The Hydraulic Office writes a Special Provision for Streambed Aggregate that meets the Hydraulic Code.
FPHPA – 37	BRIDGE	The temporary bridge span over the channel must be a minimum of xx feet.	BRIDGE: The temporary bridge span over the channel must be a minimum of [INSERT TEXT HERE] feet.	Design Construction	WSDOT Contractor	SS 6-02.3(17)A, SS 6-02.3(17)B, SS 6-02.3(17)C, SS 6-02.3(17)D,	Temporary bridge work can be consider falsework. No minimum exists but rather functional standards. Guide Specifications for Bridge Temporary Works is in 6-02.3(17)B.
FPHPA – 38	IN-WATER WORK AREA ISOLATION USING BLOCK NETS	Install 3/32” knotless stretched nylon block nets at sites with reduced flow volume or velocity, uniform depth, and good accessibility.	IN-WATER WORK AREA ISOLATION USING BLOCK NETS: Install 3/32” knotless stretched nylon block nets at sites with reduced flow volume or velocity, uniform depth, and good accessibility.	Construction	WSDOT	Fish Exclusion Protocols and Standards (2023 Update)	This is very project specific. The WSDOT Directing Biologist will determine amount, size, and location based upon size conditions and species.
FPHPA – 39	IN-WATER WORK AREA ISOLATION USING BLOCK NETS	Install block nets at sites with reduced flow volume or velocity, uniform depth, and good accessibility.	IN-WATER WORK AREA ISOLATION USING BLOCK NETS: Install block nets at sites with reduced flow volume or velocity, uniform depth, and good accessibility.	Construction	WSDOT Biology	Fish Exclusion Protocols and Standards (2023 Update)	None
FPHPA – 40	IN-WATER WORK AREA ISOLATION USING BLOCK NETS	Install block nets at an angle to the direction of flow (not perpendicular to the flow) to avoid entrapping fish in the nets.	IN-WATER WORK AREA ISOLATION USING BLOCK NETS: Install block nets at an angle to the direction of flow (not perpendicular to the flow) to avoid entrapping fish in the nets.	Construction	WSDOT Biology	Fish Exclusion Protocols and Standards (2023 Update)	None
FPHPA – 41	IN-WATER WORK AREA ISOLATION USING BLOCK NETS	After the first block net is secured at the upstream end, use a second block net to herd fish downstream and out of the project area.	IN-WATER WORK AREA ISOLATION USING BLOCK NETS: After the first block net is secured at the upstream end, use a second block net to herd fish downstream and out of the project area.	Construction	WSDOT Biology	Fish Exclusion Protocols and Standards (2023 Update)	None

Commitment ID #	Category	WDFW HPA Provision Language	Modified Language for Contract Language / Commitment Tracking System	Phase	Responsibility	Existing Method of Implementation	Notes
FPHPA – 42	IN-WATER WORK AREA ISOLATION USING BLOCK NETS	Install a downstream block net if fish may reenter the work area from downstream.	IN-WATER WORK AREA ISOLATION USING BLOCK NETS: Install a downstream block net if fish may reenter the work area from downstream.	Construction	WSDOT Biology	Fish Exclusion Protocols and Standards (2023 Update)	None
FPHPA – 43	IN-WATER WORK AREA ISOLATION USING BLOCK NETS	Secure block nets along both banks and the channel bottom to prevent failure from debris accumulation, high flows, and/or flanking.	IN-WATER WORK AREA ISOLATION USING BLOCK NETS: Secure block nets along both banks and the channel bottom to prevent failure from debris accumulation, high flows, and/or flanking.	Construction	WSDOT Biology	Fish Exclusion Protocols and Standards (2023 Update)	None
FPHPA – 44	IN-WATER WORK AREA ISOLATION USING BLOCK NETS	Check block nets at least three times a day for entangled fish and accumulated debris.	IN-WATER WORK AREA ISOLATION USING BLOCK NETS: The Contractor shall check block nets at least three times a day for entangled fish and accumulated debris.	Construction	Contractor	SS 8-31.3(5)	None
FPHPA – 45	IN-WATER WORK AREA ISOLATION USING BLOCK NETS	Block nets must be checked frequently throughout the day to ensure they remain installed along the banks and creek bottom, that there are no entangled fish, and it is clear of accumulated debris. Natural debris may be released into free-flowing water downstream of the bypass.	IN-WATER WORK AREA ISOLATION USING BLOCK NETS: Block nets must be checked frequently throughout the day to ensure they remain installed along the banks and creek bottom, that there are no entangled fish, and it is clear of accumulated debris. Natural debris may be released into free-flowing water downstream of the bypass.	Construction	Contractor	SS 8-31.3(5)	None
FPHPA – 46	IN-WATER WORK AREA ISOLATION USING BLOCK NETS	Install the four block nets and work site isolation components within the approximate locations and with the configurations detailed on sheet [INSERT TEXT HERE] of the approved plans.	IN-WATER WORK AREA ISOLATION USING BLOCK NETS: Install the four block nets and work site isolation components within the approximate locations and with the configurations detailed on sheet [INSERT TEXT HERE] of the approved plans.	Construction	WSDOT	Fish Exclusion Protocols and Standards (2023 Update)	This is very project specific. The WSDOT Directing Biologist will determine amount, size, and location based upon size conditions and species.
FPHPA – 47	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS	Sequence the work to minimize the duration of dewatering.	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS: Sequence the work to minimize the duration of dewatering.	Construction	Contractor	SS 8-31.3(2)B	Note: Diversions cost money. As a matter of financial efficiency, contractors will sequence to save time and money.
FPHPA – 48	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS	Use the least-impacting feasible method to temporarily bypass water from the work area. Consider the physical characteristics of the site and the anticipated volume of water flowing through the work area.	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS: Use the least-impacting feasible method to temporarily bypass water from the work area. Consider the physical characteristics of the site and the anticipated volume of water flowing through the work area.	Construction	Contractor	SS 8-31.1, SS 8-31.3(2)B	Note: Contractors will decide based upon geological, cost, impact areas, and construction factors on which bypass works best for them.
FPHPA – 49	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS	The hydraulic capacity of the stream bypass must be equal to or greater than the ADD TEXT HERE-year peak flow event expected when the bypass will be operated.	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS: The hydraulic capacity of the stream bypass must be equal to or greater than the [ADD TEXT HERE] year peak flow event expected when the bypass will be operated.	Design Construction	WSDOT Contractor	SS 8-31.3(1)A, SS 8-31.3(2)B	WSDOT provides the flows and typically the bypass flow will be based upon a 2 year event

Commitment ID #	Category	WDFW HPA Provision Language	Modified Language for Contract Language / Commitment Tracking System	Phase	Responsibility	Existing Method of Implementation	Notes
FPHPA – 50	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS	Install the temporary bypass before starting other construction work in the wetted perimeter using the ADD TEXT HERE bypass method approved by the Washington Department of Fish and Wildlife.	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS: Install the temporary bypass before starting other construction work in the wetted perimeter using the [ADD TEXT HERE] bypass method approved by the Washington Department of Fish and Wildlife.	Construction	Contractor	SS 8-31.3(1)B, SS 8-31.3(2)B	None
FPHPA – 51	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS	Install a cofferdam or similar device at the upstream and downstream end of the bypass to prevent backwater from entering the work area.	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS: Install a cofferdam or similar device at the upstream and downstream end of the bypass to prevent backwater from entering the work area.	Construction	Contractor	SS 8-31.3(1)A, SS 8-31.3(2)B	Contractor will provide detail in how it will prevent water from entering the isolated work area.
FPHPA – 52	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS	Return diverted water to the channel immediately downstream of the work area. Dissipate flow energy from the diversion to prevent scour or erosion of the channel and bank.	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS: Return diverted water to the channel immediately downstream of the work area. Dissipate flow energy from the diversion to prevent scour or erosion of the channel and bank.	Construction	Contractor	SS 8-31.3(1)A, SS 8-31.3(2)B	None
FPHPA – 53	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS	If the diversion inlet is a gravity diversion that provides fish passage, place the diversion outlet where it facilitates gradual and safe reentry of fish into the stream channel.	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS: If the Contractor chooses to us a gravity diversion inlet that provides fish passage, place the diversion outlet where it facilitates gradual and safe reentry of fish into the stream channel.	Construction	Contractor	Prepare a special provision if this permit condition is in play.	WSDOT has responsibility to ensure this detail when reviewing the TSD submittal and overseeing contractor activities of the TSD.
FPHPA – 54	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS	If the bypass is a pumped diversion, once started it must run continuously until it is no longer necessary to bypass flows. This requires back-up pumps on-site and twenty-four-hour monitoring for overnight operation.	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS: If the Contractor chooses to use a pumped diversion, it must run continuously until it is no longer necessary to bypass flows. The Contractor shall provide back-up pumps on-site and twenty-four-hour monitoring for overnight operation.	Construction	Contractor	SS 8-31.3(1)A, SS 8-31.3(2)B	Contractor is required to have back up pumps operational within hours.
FPHPA – 55	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS	If the diversion inlet is a pump diversion in a fish-bearing stream, the pump intake structure must have a fish screen installed, operated, and maintained in accordance with RCW 77.57.010 and 77.57.070. Screen the pump intake with one of the following: a) Perforated plate: 0.094 inch (maximum opening diameter); b) Profile bar: 0.069 inch (maximum width opening); or c) Woven wire: 0.087 inch (maximum opening on the diagonal). The minimum open area for all types of fish screens is twenty-seven percent. The screened intake facility must have enough surface area to ensure that the velocity through the screen is less than 0.33 feet per second. Maintain fish screens to prevent injury or entrapment of fish.	IN-WATER WORK AREA ISOLATION USING A TEMPORARY BYPASS: The Contractor shall install, operate, and maintain a fish screen when using a pumped diversion or dewatering the isolated work area in accordance with RCW 77.57.010 and 77.57.070. The pump screen shall comply with the following: a) Perforated plate: 0.094 inch (maximum opening diameter); b) Profile bar: 0.069 inch (maximum width opening); or c) Woven wire: 0.087 inch (maximum opening on the diagonal). The minimum open area for all types of fish screens is twenty-seven percent. The screened intake facility must have enough surface area to ensure that the velocity through the screen is less than 0.33 feet per second. Maintain fish screens to prevent injury or entrapment of fish.	Construction	Contractor	SS 8-31.3(4), Fish Exclusion Protocols and Standards (2023 Update)	None

FPHPA – 103	PROJECT DESIGN	The outfall must have a [TEXT] energy dissipater located [TEXT].	PROJECT DESIGN: The outfall must have a [ENTER TEXT HERE] energy dissipater located [ENTER TEXT HERE].	Construction	Contractor	Would require a special provision	None
FPHPA – 104	PROJECT DESIGN	Install the toe to protect the integrity of bank protection material.	PROJECT DESIGN: Install the toe to protect the integrity of bank protection material.	Construction	Contractor	Permit Application Package, Contract Plans, SS 1-04	None
FPHPA – 105	PROJECT DESIGN	Bury the base of the structure deep enough to prevent undermining.	PROJECT DESIGN: Bury the base of the structure deep enough to prevent undermining.	Design Construction	WSDOT Contractor	Permit Application Package, Contract Plans, SS 1-04	None
FPHPA – 106	UTILITY CROSSINGS	Align the conduit as perpendicular as possible to the watercourse.	UTILITY CROSSINGS: Align the conduit as perpendicular as possible to the watercourse.	Design Construction	WSDOT Contractor	Utility Permits and Franchises	Coordination with Utility Office
FPHPA – 107	UTILITY CROSSINGS	Install the conduit well below scour depth of the watercourse to prevent natural scouring of the stream bed from exposing the pipeline or cable.	UTILITY CROSSINGS: Install the conduit well below scour depth of the watercourse to prevent natural scouring of the stream bed from exposing the pipeline or cable.	Design Construction	WSDOT Contractor	Utility Permits and Franchises	Coordination with Utility Office
FPHPA – 108	DEMOBILIZATION AND CLEANUP	Prevent the existing structure and associated construction materials from entering the stream when removing them.	DEMOBILIZATION AND CLEANUP: Prevent the existing structure and associated construction materials from entering the stream when removing them.	Construction	Contractor	SS 1-07.5(2), SS 1-07.5(3), SS 3-02.3(2)A1, SS 3-03.3(7)C	For bridge removal, the Standard Specifications cover it. 2-02.3(2)A1 requires a Type 2E bridge demolition plan submittal. A licensed PE must prepare this plan and they have to respond to our comments.

Commitment ID #	Category	WDFW HPA Provision Language	Modified Language for Contract Language / Commitment Tracking System	Phase	Responsibility	Existing Method of Implementation	Notes
FPHPA – 109	DEMOBILIZATION AND CLEANUP	Restore the disturbed bed, banks, and riparian zone elevations and contours to pre-project condition.	DEMOBILIZATION AND CLEANUP: Restore the disturbed bed, banks, and riparian zone elevations and contours to pre-project condition.	Construction	Contractor	Permit application package, Contract Plans, SS 1-04, SS 8-31.3(2)	The Roadside Restoration Worksheet is filled out during project scoping or estimating phase. It documents decisions as a response to roadside policies as stated in the *Roadside Policy Manual* or permit requirements. The project is designed to meet those requirements. The results are Plans and Specifications that become part of the Contract, which are implemented by the Contractor.
FPHPA – 110	DEMOBILIZATION AND CLEANUP	To prevent fish from stranding, backfill trenches, depressions, and holes in the bed that may entrain fish during high water or wave action.	DEMOBILIZATION AND CLEANUP: To prevent fish from stranding, backfill trenches, depressions, and holes in the bed that may entrain fish during high water or wave action.	Construction	Contractor	SS 1-04, SS 8-31.3(2)	WSDOT will design the stream channel to meet the Hydraulic Code, and be either a Stream Simulation, Bridge, or Equivalent Design.
FPHPA – 111	DEMOBILIZATION AND CLEANUP	Upon completion of the project, remove all materials or equipment from the site and dispose of all excess spoils and waste materials in an upland area above the limits of anticipated floodwater.	DEMOBILIZATION AND CLEANUP: Upon completion of the project, remove all materials or equipment from the site and dispose of all excess spoils and waste materials in an upland area above the limits of anticipated floodwater.	Construction	Contractor	SS 8-31.1, SS 8-31.3(2)B	The contractor will not want to leave equipment on site; nor would WSDOT allow that.
FPHPA – 112	DEMOBILIZATION AND CLEANUP	Remove temporary erosion and sediment control methods after job site is stabilized or within three months of project completion, whichever is sooner.	DEMOBILIZATION AND CLEANUP: Remove temporary erosion and sediment control methods after job site is stabilized or within three months of project completion, whichever is sooner.	Construction	Contractor	SS 8-31.3(6)	None
FPHPA – 113	DEMOBILIZATION AND CLEANUP	Before the end of the in-water work period specified in the ‘timing limitations´ provision, remove all temporary stream crossings and restore the bed, banks, and riparian zone to pre-project condition.	DEMOBILIZATION AND CLEANUP: Before the end of the in-water work period specified in the ‘timing limitations´ provision, remove all temporary stream crossings and restore the bed, banks, and riparian zone to pre-project condition.	Construction	Contractor	SS 8-31.3(2)B	None
FPHPA – 114	MAINTENANCE AND OPERATION	The owner(s) must maintain the culvert to ensure it provides continued, unimpeded fish passage. If the culvert becomes a hindrance to fish passage, the owner must obtain an Hydraulic Project Approval and provide prompt repair.	MAINTENANCE AND OPERATION: WSDOT must maintain the culvert to ensure it provides continued, unimpeded fish passage. If the culvert becomes a hindrance to fish passage, WSDOT must obtain a Hydraulic Project Approval and provide prompt repair.	Maintenance	WSDOT	Maintenance & Operations	If the repair is needed within five years of when WDFW first issued the HPA, the original permit may be modified to include repairs. Repairs could also occur under the Culvert Maintenance GHPA if the required work fits within the permit provisions.
